Frieren

Senior Backend Engineer & Systems Architect

+81 (3) 1000-0078 frieren@ende.dev

Tokyo, Japan

github.com/frieren linkedin.com/in/frieren

Summary

Backend engineer with 10+ years of experience building resilient distributed systems and high-throughput data platforms. Known for methodical problem-solving, deep architectural thinking, and a quiet dedication to long-term code quality. Experienced in mentoring engineers and leading complex migrations with patience and precision.

Work Experience

Jujutsu Systems
April 2021 - Present
Tokyo, Japan

Senior Backend Engineer

- Architected a curse-detection microservice mesh handling 5M+ classification events/day with sub-50ms p99 latency.
- Led a zero-downtime migration from a monolithic Oracle database to a sharded PostgreSQL cluster, reducing query costs by 55%.
- Mentored 3 junior engineers (including Fern and Stark) through weekly architecture reviews and pair programming sessions.

Musubi Analytics
September 2018 - March 2021
Itomori, Japan

Software Engineer

- Built a real-time temporal data pipeline correlating events across time zones, processing 800k+ records/day with Apache Flink.
- Developed REST and gRPC APIs in Go powering a mobile app with 200k+ monthly active users.
- Introduced property-based testing practices that reduced production incidents by 35% quarter-over-quarter.

Moving Castle Technologies
June 2016 - August 2018
Kyoto, Japan

Junior Developer

- Developed internal tooling in Python for automated infrastructure provisioning across multi-cloud environments.
- Wrote ETL pipelines processing hat shop inventory data for 12 regional warehouses.
- Automated deployment workflows with Ansible, cutting release time from 4 hours to 20 minutes.

Selected Projects

Jujutsu Systems
2023

Grimoire Registry

Distributed spell-cataloging service with full-text search across 2M+ entries. Features real-time sync, conflict resolution, and a custom query language for complex attribute filtering.

Technologies:

Go PostgreSQL Elasticsearch gRPC Kubernetes

Open Source
2022 - Present

Kataware-doki

Time-series anomaly detection library for infrastructure monitoring. Implements sliding-window algorithms and statistical methods. 2.1k GitHub stars and adopted by 4 companies in production.

Technologies:

Rust Python Prometheus Grafana

Education

University of Tokyo
2012 - 2016
Tokyo, Japan

B.Eng. Computer Science

Graduated top of class. Concentration in distributed systems and formal verification. Thesis on Byzantine fault tolerance in heterogeneous networks.

Skills

Languages Go Rust Python TypeScript SQL

Frameworks Gin Actix FastAPI React Next.js

Infrastructure AWS GCP Kubernetes Docker Terraform

Data PostgreSQL Redis Kafka Elasticsearch Apache Flink
