

Frieren

Senior Backend Engineer & Systems Architect

+81 (3) 1000-0078 | frieren@ende.dev | Tokyo, Japan | github.com/frieren | linkedin.com/in/frieren

SUMMARY

Backend engineer with 10+ years of experience building resilient distributed systems and high-throughput data platforms. Known for methodical problem-solving, deep architectural thinking, and a quiet dedication to long-term code quality. Experienced in mentoring engineers and leading complex migrations with patience and precision.

WORK EXPERIENCE

Senior Backend Engineer, *Jujutsu Systems*

April 2021 - Present | Tokyo, Japan

- Architected a curse-detection microservice mesh handling 5M+ classification events/day with sub-50ms p99 latency.
- Led a zero-downtime migration from a monolithic Oracle database to a sharded PostgreSQL cluster, reducing query costs by 55%.
- Mentored 3 junior engineers (including Fern and Stark) through weekly architecture reviews and pair programming sessions.

Software Engineer, *Musubi Analytics*

September 2018 - March 2021 | Itomori, Japan

- Built a real-time temporal data pipeline correlating events across time zones, processing 800k+ records/day with Apache Flink.
- Developed REST and gRPC APIs in Go powering a mobile app with 200k+ monthly active users.
- Introduced property-based testing practices that reduced production incidents by 35% quarter-over-quarter.

Junior Developer, *Moving Castle Technologies*

June 2016 - August 2018 | Kyoto, Japan

- Developed internal tooling in Python for automated infrastructure provisioning across multi-cloud environments.
- Wrote ETL pipelines processing hat shop inventory data for 12 regional warehouses.
- Automated deployment workflows with Ansible, cutting release time from 4 hours to 20 minutes.

SELECTED PROJECTS

Grimoire Registry, *Jujutsu Systems*

2023

Distributed spell-cataloging service with full-text search across 2M+ entries. Features real-time sync, conflict resolution, and a custom query language for complex attribute filtering.

Technologies: Go, PostgreSQL, Elasticsearch, gRPC, Kubernetes

Kataware-doki, *Open Source*

2022 - Present

Time-series anomaly detection library for infrastructure monitoring. Implements sliding-window algorithms and statistical methods. 2.1k GitHub stars and adopted by 4 companies in production.

Technologies: Rust, Python, Prometheus, Grafana

EDUCATION

B.Eng. Computer Science, *University of Tokyo*

2012 - 2016 | Tokyo, Japan

Graduated top of class. Concentration in distributed systems and formal verification. Thesis on Byzantine fault tolerance in heterogeneous networks.

SKILLS

Languages

Go, Rust, Python, TypeScript, SQL

Frameworks

Gin, Actix, FastAPI, React, Next.js

Infrastructure

AWS, GCP, Kubernetes, Docker, Terraform

Data

PostgreSQL, Redis, Kafka, Elasticsearch, Apache Flink

REFERENCES

Gojo Satoru

Phone: +81 (3) 1000-0006 | **Email:** gojo.satoru@jujutsu.com

CTO at Jujutsu Systems. Direct manager for 3+ years. Can speak to system design expertise and technical leadership across distributed platforms.

Mitsuha Miyamizu

Phone: +81 (577) 32-0987

Co-founder of Musubi Analytics. Collaborated closely on the temporal data pipeline and real-time event processing systems.
